

The Light of Larson's Cross

By Jan Michael — May 16, 2018 / Corrections: July 1, 2026 — <https://lightgodfaith.com>

Faith and belief will in no wise open the doors of heaven to man. They but point out the path which leads to them. Through comprehension alone can man hope to know the language of light. And when that day comes to waiting man then he will know that truth, beauty and love, in equilibrium, are the very foundations of universal existence.

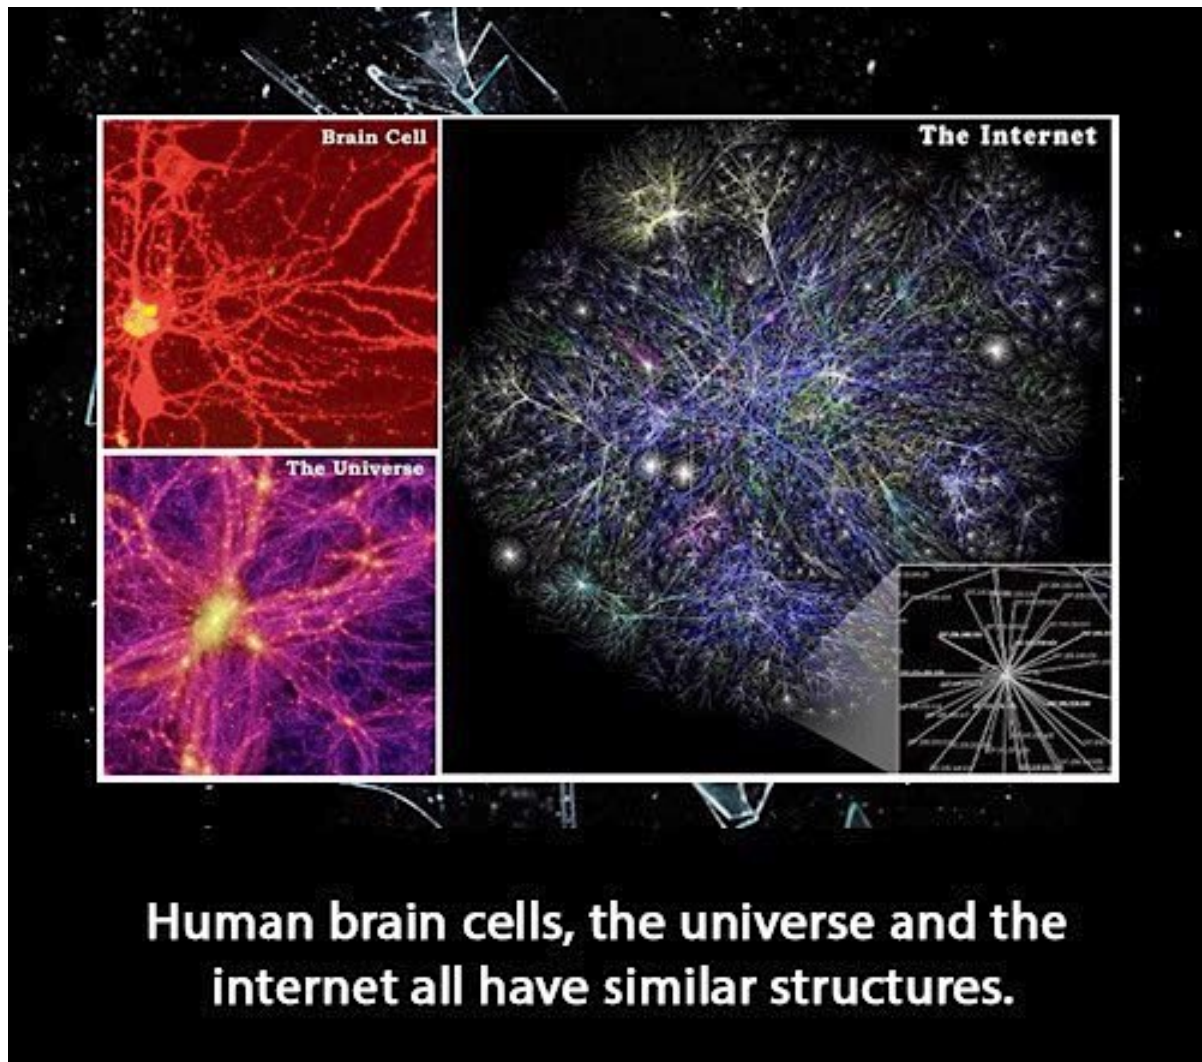

When he acquires the stability of perfect balance in his thinking, then he will be ready for the light; and for the ecstasy of universal thinking in the knowledge of all things; and for all-power within universal limitations; and for all-presence in unity with the One. ^{*1}

The Grand Cycle of the Universe

Diffuse intergalactic nebulae and matter coalesce under the influence of gravity, form stars; stars aggregate into star clusters and clusters into small galaxies. These galaxies recede from each other due to the outward progression of space-time. The galaxies cannibalize smaller galaxies and become larger ones, which eventually undergo disintegration on reaching the upper stability limit of matter, ejecting part of the matter into the cosmic sector. In the cosmic sector, a similar sequence of events happen (with the roles of space and time interchanged, of course) and eventually the c-matter ejected from the c-galaxies recedes outward in time and enters our material sector at random locations and starts the material half of the evolutionary cycle as diffuse intergalactic nebulae and dust.

Thus, on the whole, the universe remains the same, though each half (the material and the cosmic) continually evolves. The material sector, expanding in space, evolves in time. The cosmic sector, on the other hand, expanding in time, evolves in space. Further, the end of evolution in one sector marks the beginning of evolution in the other sector, cyclically, reminding us of the Evolutionary Spiral. *5

God Awareness

The goal of man is Cosmic Conscious Self-awareness—which is God-awareness.

The mass of mankind is still barbaric. He is still body-sensed-body which lives and dies. He is slave to life then to death—for life and death are real to him. Man must forever be "transformed by the renewing of his Mind" until Mind transcends body instead of body transcending Mind.

The very few transcendent ones among men who are far in their unfolding and have become strong with God-awareness they alone are free. These have risen above their sensing. These have conquered both life and death through their knowing.

The life-death journey from body sensing to Mind knowing is a long-long journey of countless millions of seeming repetitions. He who has begun to know that these seeming life-death sequences are not repetitions—or reincarnations and are but one eternally long and continuous unfolding of one eternal idea from one point in the eternal Light of Mind has gone far toward his Cosmic Conscious goal.

He who can withdraw from the extensions of his sensing into the fulcrum of his knowing from which those extensions spring—and extend and retract them under full control of his will—becomes co-Creator with The Universal One. He is the transcendent being who has become the fulcrum of his own power. *6

Something To Ponder

To solve our problems we MUST rise to a level of consciousness above our norm. For us that level is one of humble sober-minded Spiritual Awareness. *7

ABOVE, "ORBS" (CROPPED) PHOTOGRAPH BY SANDRA UNDERWOOD *8

Electricity—RUINS THAT GLOW IN THE NIGHT

Astonishing—but was it true?

On trek through the forbidding Matto Grosso region of Brazil in 1925, Colonel P.H. Fawcett, D.S.O., was challenged by native reports of mysterious cold lights in some ruined cities of the jungle.

Not only that. There existed, it was claimed, a city still living, inhabited, illuminated at night. Could this really be? Might there be some still surviving remnant of a long lost civilization, which was using “forgotten” knowledge?

Fawcett came out averring he had glimpsed one of these jungle cities. He reentered the region to further pursue his passion, but this time disappeared without trace. ^{*8}

LIGHT DOES NOT TRAVEL

The speed with which light presumably travels is 186,400 miles per second. The distance between stars is so great that the speed of light is computed as light years, for the distance computed by lesser units of time would yield figures so great that they would be meaningless.

Light only seems to travel, It is but one more of the countless illusions caused by wave motion. Waves of the ocean seem to traverse the ocean but they only appear to do so, for waves are pistons in the universal engines, and pistons operate up and down. Wave pistons of light, or of the ocean, operate radially and spirally inward and outward, toward and away from gravity.

Waves of light do not travel. They reproduce each other from wave field to wave field of space. The planes of zero curvature which bound all wave fields act as mirrors to reflect light from one field into another. This sets up an appearance of light as traveling, which is pure illusion. ^{*9}

Mysticism ^{*11}

- Intense objectivity: Enlightenment is the most real thing experienced.
- Unity: The many is an illusion, the actual One and mystic is that One.
- Religious awe: Emanations of numinosity, being immersed in One-ness.
- Ecstasy and bliss: Non-dual One, profound calm, extreme joyousness.
- No time or space: Space vanishes, time's eternal. All is now, here, One.
- Inexpressibility: Indescribable emotions, linguistically undefinable.

Ecstasy

The deep desire to get PEAK EXPERIENCE—or ECSTASY is healthy and even good for survival—it is not a mistake. You were sure of that the first time you ever got off a roller coaster. Your eyes were perhaps bigger than they had ever been before. You had felt a tingle all over, as your awareness came completely into the present. When you experience acceleration - it compresses your attention. This is actually a deep clue to what happens in your blood and genes as you get ready to die or have ecstasy successfully. ^{*12}

Radiation

Nevertheless, now that among free corpuscles in a vacuum tube, or among those expelled from radium, it is becoming practically possible to attain these high speeds, and even to base crucial determinations upon them, it becomes necessary to consider the matter more carefully. In a publication at Göttingen in January 1902, Dr. Abraham has thus discriminated what he calls “longitudinal” from what he calls “transverse” inertia; making inertia depend not only on the speed but on the direction of acceleration; each direction having a different inertia of its own.

And all these results are still further complicated by a consideration of the effect of acceleration itself, which, whenever it is violent, gives rise to some perceptible radiation, involving dissipation of energy; and this radiation loss of energy, though it will be primarily represented in the motion as resistance or velocity term, may secondarily have an effect on inertia;—probably, however, quite a small and subordinate effect in all practical cases, and no effect at all so long as motion occurs with uniform speed in a straight line: for then there is no radiation. But then, of course, under those conditions it is not possible to test or measure the inertia of a body; it is only when the motion is either curved or changed in some way that inertia becomes prominent, and then there is necessarily some, though usually very small, radiation too. ^{*13}

Exist

The doctrines of the world's great religions all rest upon a proposition which we may express in this fashion: *There is an existence outside the physical universe.* (This is true even where the religion is not theistic.) No proof of this assertion is offered—at least, no proof of a character acceptable to science—and we are told that it must be accepted on faith. Scientists look upon this very skeptically, and those who hold to the strictly scientific point of view reject the thesis on the ground that there is no competent evidence of such an outside existence. Every fact to which we have access, these dissenters say, can reasonably be explained in terms of the physical universe of science. ^{*14}

Humanity

When it is said that someone is “possessed,” what is meant is that his consciousness has become dominated by negative attractor fields from which the person cannot extricate himself. By this definition, we can see that whole segments of society are so thoroughly “possessed” that they themselves are unconscious of their motives. Wisdom tells us that one worships either heaven or hell and will eventually become the servant of one or the other. Hell is not a condition imposed by a judgmental God, but rather the inevitable consequence of one's own decisions. Hell is the final outcome of constantly choosing the negative and thus isolating oneself from love and truth.

Enlightened beings have always described the general populace as being “trapped in a dream”; the majority of people are driven by unseen forces, and most are in despair over this fact for a great deal of their lives. We pray to God to relieve us of the burden of our sins, and by confession, we look for relief. Remorse seems woven into the fabric of life. How can salvation be possible, then, for those who have unwittingly become ensnared in such destructive influences?

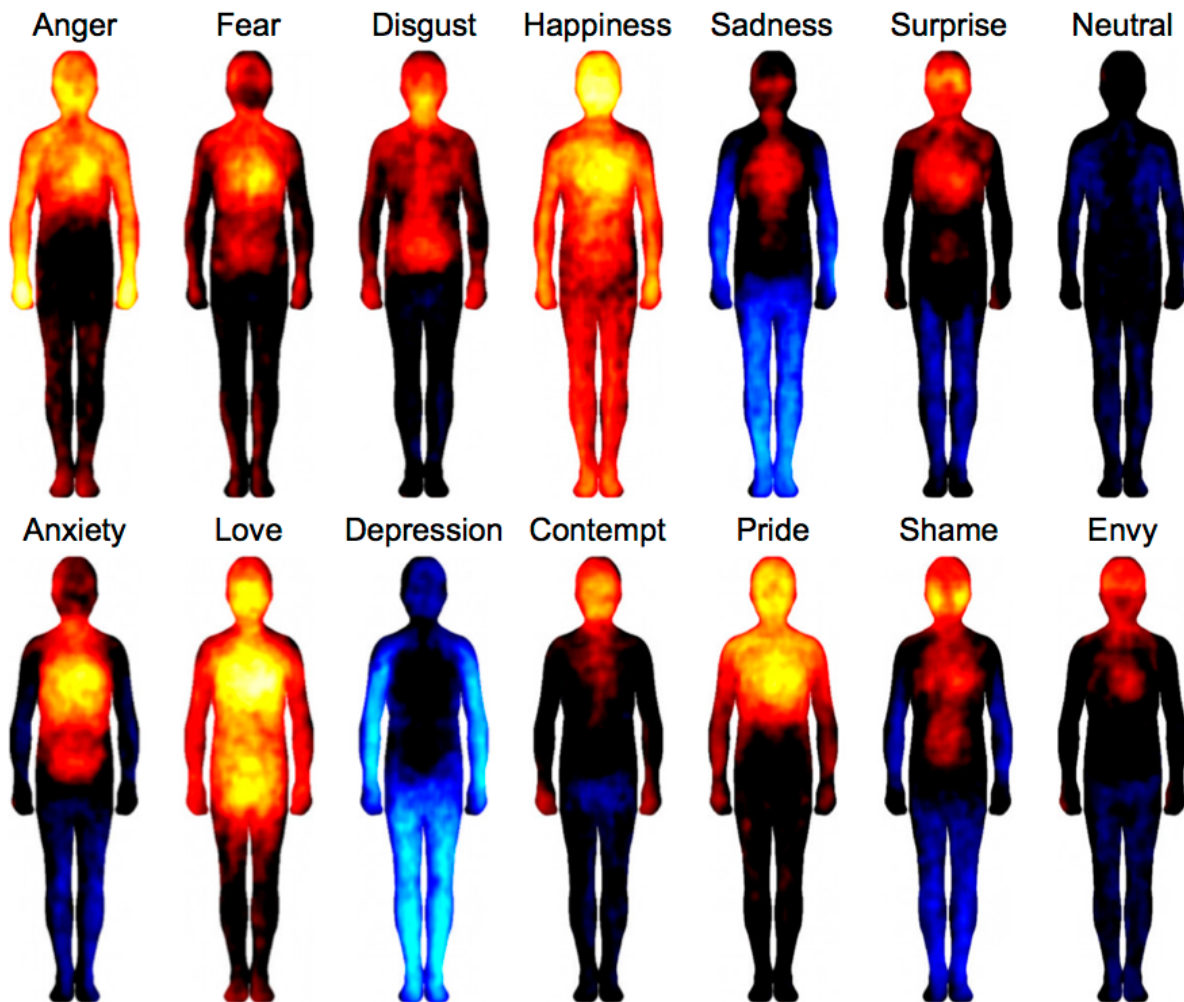

In fact, however, even from a merely scientific viewpoint, salvation is indeed possible; in truth, it is guaranteed by the simple fact that the energy of a loving thought is enormously more powerful than that of a negative one. Therefore, the traditional solutions of love and prayer have a sound scientific basis; man has within his own essence the power of his own salvation.

Humanity could be called an affliction with which we are all burdened. We do not remember asking to be born, and we inherited a mind so limited that it is hardly capable of distinguishing between that which embraces life and that which leads to death. The whole struggle of life is in transcending this myopia. We cannot enter into higher levels of existence until we advance in consciousness to the point where we overcome duality and are no longer earthbound. Perhaps it is because of our collective will to transcend that we have earned the capacity to finally discover an inborn compass to lead us out of the darkness of ignorance. We needed something very simple, which could bypass those traps of the wily intellect for which we have paid such an enormous price. This compass merely says “yes” or “no.” It tells us that what is aligned with heaven makes us go strong and what is aligned with hell makes us go weak. ^{*15}

Body Emotions

ABOVE, IMAGE FROM A STUDY ATTEMPTING TO MEASURE A BODY'S PHYSICAL/EMOTIONAL RESPONSE TO DIFFERENT WORDS *17

Life

We hold from God the gift which includes all others. This gift is life—physical, intellectual, and moral life.

But life cannot maintain itself alone. The Creator of life has entrusted us with the responsibility of preserving, developing, and perfecting it. In order that we may accomplish this, He has provided us with a collection of marvelous faculties. And He has put us in the midst of a variety of natural resources. By the application of our faculties to these natural resources we convert them into products, and use them. This process is necessary in order that life may run its appointed course.

Life, faculties, production—in other words, individuality, liberty, property—this is man. And in spite of the cunning of artful political leaders, these three gifts from God precede all human legislation, and are superior to it. *18

Creative Thinking

The dependability of Natural Law grows out of the balance of power between the two creative principles of Nature. The undependability of man's creations grows out of his lack of ability to balance his thinking with his acting. Nature is absolute. Without Natural Law there is no room for unbalance. Every portion of the universal concept must come into being (or form) true to concept. Man's aspirations and concepts rarely come into being true to concept. His thoughts and actions rarely balance themselves. When any man who conceives a great principle can balance the power of that thought-principle with an equally balanced series of actions to give perfection of form to that principle, he is heralded by all men as a genius.

The success of such a person lies in his relative ability to demonstrate a thought-principle by creating a form for it. The greater a man's ability to express himself creatively by demonstrating the thought-principles which flow through him, the greater his power. The Universal Creative Force, as evidenced in Natural Law, should be man's standard, his guide, and his goal.

The nearer man's approach to the absolute balance between universal creative thought and universal creative action, as expressed by the electric interrelation between space and material form of this electric universe of balanced thought and action, the greater the power of man.

Knowledge of itself is not power, as the proverb states, nor does one's ability to think great thoughts constitute power, for thinking without action creates nothing. No principle has been demonstrated. The thinker has not demonstrated creative ability until he has acted to bring the form of his idea into being.

Thinking without action images visions which die stillborn. Dreamers and visionaries who do not act to give form to their dreams and visions do not express power. They are impotent even though their inspiration be the mightiest ever conceived in the mind of man. They do not serve the world, even though their inner ecstasy makes them feel as a god.

Action without thinking does not constitute power, and for the same reason. Through action alone nothing is created. Through action alone things created by others are but repeated. Actions expressed upon the foundations of other peoples' creations are labor. Laborers are followers of leaders who create. In a certain respect they are physical extensions of minds which function in other bodies. As man can do but two things, think and act, so must man be ever classified as thinker or follower/laborer in accordance with each man's ability to both think and act.

Thinking is done with the mind and actions are performed with the body. The mind of the thinker contacts the inspirational Source of the Universal Mind from which this creating universe knows and owes its being. To the thinker there are no limitations which are not universal.

The mind of the follower/laborer is bound to his body sensing. His limitations are the limitations of objective and material sensing. He is a follower who resists change, for he is trained to repeat things as they are. The thinker has no fear of anything. He is above fear. The follower fears everything. His objectivity breeds fear of everything in him.

The still center of man is the Kingdom of God, the still Light. And around that still Light is the coil, or a series of coils that we call "man," his knowing and thinking. There is no expression of power there, whatsoever, other than the power expressed in matter itself, until man knows and thinks. All the power that man has is in his knowing. ^{*19}

Camera

Painting and drawing are techniques for producing pictures. So is photography. But the special nature of photography will remain obscure unless we think of it in another way as well—as a contribution to the enterprise of seeing. The invention of the camera gave us not just a new method of making pictures and not just pictures of a new kind: it gave us a new way of seeing.^{*20}

Solar Eclipse

ABOVE, PHOTOGRAPHS BY J, REVEALING A TOTAL SOLAR ECLIPSE: MOMENTS PRIOR TO TOTALITY (LEFT) AND DURING TOTALITY (RIGHT).

Compared to the miracles of every day life and existence, once in a while, it seems those in the heavens above seem to go out of their way to remind us to wonder, to inspire awe, to tickle our wisdom, and entice us to look up and beyond our common manufactured awareness, toward a free and natural spectacle, so meticulously perfect in its execution, it might just cause even the most hardened of atheists to ask, just “who” would have the power to create such a wonder?

Star Child

I went out for a bite to eat at one of the many food trucks in Austin. While standing in line at the organic, tofurkey, soy bean sprout wrap trucks, a homeless man with a beard approached me. He said he knew I was heading to New Mexico. I gave him 5 dollars and wished him good luck.

My food came and I sat down at a pick-nick table and began eating. The old man sat down next to me. He had a white beard, Oakley blades and boots with Cuban heels.

"I'm heading to Santa Fe. Let me give you a lift."

I finished eating and followed him to a black Escalade. We got in and started driving. The old man told me his name was Tom Fruend. He worked building boats in Florida in the wintertime and spent the rest of the year meandering around the 4 corners and Texas.

We drove for 20 minutes then he pulled into the departures section of Austin Berstrom International Airport. He left the Escalade running next to the white curb.

"What are we doing here?" I asked.

"We're talking my Gulfstream." He said and winked.

We walked into the airport and through an unmarked door, down a series of long hallways, more doors, and hallways till we were out on the tarmac. Then we were on the plane taxiing to the runway. I heard traffic control come from the front of the plane and mention Santa Fe Municipal Airport.

The plane had a well stocked mini bar and one well endowed hostess. Tom sat down next to me and lit a Chesterfield King. He told me he had been listening to my radio program and thought it was decent. He said he had been writing some poetry and asked if I would be willing to record it. I said yes and when the plane reached cruising altitude I pulled out my computer and microphone.

I handed Tom the microphone and told him to read. Tom took off his leather vest and stood up in the plane. He appeared to be in a trance as he began mumbling and rambling about a Cyclops and the powers at be. I noticed the outline of an erection through his jeans. He finished his poem and disappeared in the bathroom with the stewardess.

The plane ride was gorgeous. We flew low over the Texas desert which went on forever. More and more trees and green appeared and the desert turned marvelous colors.

The stewardess brought me a cup of coffee, which I take the same way I take my presidents, weak and with a little cream. Before I could finish the coffee I felt a jet of warmth shoot up my spine. I looked around the plane. Everything looked sharper and brighter. The leather fabric of the seats seemed wet. I ran my hand across my seat and a rainbow of color traced off the seat, into the air, and out the window. I looked down my at my hands and henna tattoos raced from my fingertips up my forearms. I reached above me and turned on the air vent. A blast of sound, air, and light came out of the vent. It was Paul Simon's "You Can Call Me Al." Christ not that! I stood up on the plane and screamed. A primal blast of air and fire came out of my mouth. I was pulled along with it. I was out of my body and through the roof of the airplane, soaring higher and higher.

Looking back at the earth, it was quiet from far away. I was going further and further into space, passing the moon and through an asteroid belt. I counted the planets all the way up to 13 before I was out of the solar system. There were two suns, I watched them get smaller and smaller until they were pinpoints of light, like any, ordinary stars. There was nothing around me. I could hear nothing. I could see nothing. Darkness was stabbing into me from every direction, like jumping into icy water and letting the cold overtake you. The last photon of light left me and I was nothing.

I woke up on a bus bench in front of a KFC. It looked like 7 or 8 in the morning. There was a group of female singers in the parking lot rehearsing 3 part harmonies in front of a UHaul van. I asked them if I could record them. They were called the Folkadots and were from Salt Lake City. They told me we were in Santa Fe, New Mexico, and asked me why I was sleeping outside with all this expensive equipment. I told them not to ask so many questions.

I called the local Hostel, got the address, and walked a few miles to check in. The hostel was dingy but it would have to do. I checked into my room and went to the bathroom. When I looked in the mirror I screamed. My face was painted like Star Child from Kiss. ²¹

Who am I?

The following kinesiology session [... edited] identified multiple personalities (diagnosis: DID) in a patient.

(5) personalities, (1) "original" and (4) alternatives, identifying these:

** indicates current status*

* Original child (victimized young) personality is the currently active one, this one will only "grow up a little" since the "age" it's been constrained (5 yrs?)... It's a particularly "dreamer", "curious-by-nature" personality, not very practical for day-to-day routines.

* The Superior personality is intact, doesn't want to be called upon right now.

1. The "natural" personality, aka "original" personality, which has been "protected" and is intact since the exact time of the beginning of traumatic programming of alternative personalities (which occurred at age 4-5, after being identified by ... as a potential target ...).

2. The "logical" personality, rational, reasoning, cunning, scientific, financial, material, discerning, leading, philosophical, emotional. Only comes to the foreground when required, and remains "always on" in the background, calculating risk, assessing immediate situations. (Not a long term strategist, follows orders, influences process).

This personality reports to handlers, such as ... and most people ... friends with ... so basically, ... old friends ... are ... handlers, and this [*personality*] is who they interact with.

This personality is also "destructive", as in trying to destroy how others have built things, or choose to live, and tries to take control of them for [*someone else's*] interests. This personality can be disabled, even destroyed, through drugs, healing, and love.

3. The "creative" personality (not opposite to logical, as "left vs right" brain would be), but is it's own personality, which has NOT surfaced previously, and currently remains dormant. It chooses to remain dormant, and has been repressed by all other personalities, it has never been "truly needed" by others to bother coming out.

It's creative, destructive, creating, inspiring, colorful, spiritual, design, intuitive, think, build, constructive, integrating, cultural, artistic, inventive, happy, curious, energetic... When one has moments of creative inspiration, ideas spontaneously come from nowhere, when turned on has unpredictable and alternative solutions, invents a new process or product, succumbs to fanciful dreams on drugs, these are all tiny glimpses of it.

This personality is not "destructive", it invigorates, dominates, is powerful and can move mountains. It can be disabled, and destroyed. It thrives on love, joy, happiness, positive energy, nature, unpredictability, irrationality, intelligence, nurturing, caring, life.

4. This personality is active in the background, like the "logical" personality, called upon only when needed, but always aware of what's going on. Details unknown.

aaaaaaaaaa [coded name, ... being prevented from accessing the real name]

5. The "Superior" personality (perceived as 'ego')

"Red card" (which ... identified) blocks access to trauma, not personalities.

All personalities are 'in the background', not dormant. These are called up by situations which trigger them to, not by keywords. (eg. "Protector" personality was called upon ... when faced with an 'impossible' situation, a programmed survival instinct which is activated when the "superior" personality is under threat).

911

911 was the ultimate testing of the peoples tolerance for manipulation by a military/intelligence cabal, which successfully holds our government hostage. The people are helpless to bring the perps to justice. Knowing this, where does individual liberty come into play? As I have said before, what is that all-powerful 'self' – the indomitable "individual" that Jon talks about – going to do when the bombs are dropping on their heads, as in Vietnam, Iraq etc. Will we think positive thoughts, celebrate our individuality as we stand alone and become immolated? Will our creativity save us? Or is this all a middle class pipe dream, we who are comfortable, take yoga classes, watch our calories and have no idea what it's like to be under siege? ^{*22}

An intelligent person has a well working brain. Every child automatically reacts with love in a loving environment. In an non-loving environment, the gentle-natured child automatically reacts with fear, the proud-natured with anger. When the capacity to feel is filled with fear or anger, the survival mechanism trips, internalizing fear-flight or anger-fight. Internalized fear or anger controlling the mind is mental illness. Fear-flight in the gentle child is called autism. Just as removing a hand from a burning stove, the mind automatically shuts out the world of people and creates an subconscious autistic world of loving animals, tree and flower friends. The conscious mind is limited to a monitoring voice that the child does not know is itself. In teenage and older children, it is called schizophrenic. ^{*23}

Persephone

In 1996, astrologer Valerie Vaughan published a book that was truly ahead of its time. Astronomers had theorized the existence of a planet beyond Pluto (also known as Planet X and Transpluto) but Vaughan was already intuiting the deep connections and associations of the planet. At that time there was debate even about the gender of the planet. Many referred to the planet as Bacchus, the son of Venus, which is not surprising since gender seems to be fluid with Eris.

The story of Pluto and Persephone is important to examine because in 2006, Pluto and Eris were essentially wedded when Eris was discovered. Her discovery led to the two celestial bodies being cordoned off to the other land of “dwarf planet” much like Ereshkigal/Nergal and Osiris/Isis were separated from the rest of the gods to live forever in the underworld. The story begins in the fields of a Garden of Eden paradise where the young maiden Persephone is strolling about, enjoying the sunshine. Her mother, Demeter, a fierce protector, is uncharacteristically missing from the scene. Persephone, for once, is left unguarded. Persephone hears the roar of horses and before she knows it, she is scooped up by Pluto, the lord of the underworld, who has erupted from the ground. The Earth Goddess Gaia has granted Pluto’s request for a passage to be opened to travel up to the surface and kidnap Persephone. Pluto returns to the underworld with his captive, who he soon makes his Queen. When Demeter realizes that Persephone is missing, she sets out in search of her. She searches everywhere. Demeter learns that Pluto has abducted her daughter with the help of the other gods. Furious, Demeter immediately makes everything in paradise stop growing and wanders off, grief-stricken. The garden experiences its first winter, as everything appears to be dying. “Eden has been disconnected.”

The gods begin to panic and argue until they finally decide that Pluto must return Persephone. Pluto refuses, telling them that she has eaten the food of the Underworld, and in keeping with the ancient rites, she must stay with him. The gods adjourn to deliberate on the matter. This time a compromise is reached: “Persephone will return to her mother in the spring and then go back to Pluto’s world in the fall. And so, the earth blooms in the summer because of the Earth Mother’s joy at her daughter’s return, and the earth is dead in winter because Demeter mourns her daughter’s absence.” Vaughan sums it up this way:

“It is truly astounding how accurately the Persephone myth relates what is going on in our world today. The story is traumatic and stressful, yet it is not without a hopeful note. Persephone’s myth tells of the eternal return, the carrying of the seed of renewal, the promise that life goes on, even after death and separation. It is truly a myth for our time: the heroine’s journey.” *24

The Montauk Project *25

- Its origins go back to 1946/47, when the war was over—Operation *Paperclip*, German scientists were brought to America.
- The Nazis proposed a research into mind control—defeating the enemy combatants by manipulating their minds with electronic systems—used in the *Gulf War* in 1991.
- The Germans were working on time travel and didn’t know that the Americans were working on it too, but in 1936/38 under Project *Southern Cross*.
- ETs knew how to time travel, we also did to some extent, but they also knew how to transport oneself from point A to point B instantaneously through hyperspace (a.k.a. “wormhole”).

Superfluid

The results of the fireballs, of visible but small size ~ 0.1 mm, from the Brookhaven National Laboratory Relativistic Heavy Ion Collider have yielded unexpected results. The heavy ion (gold) collisions on gold were designed to produce a media that mimicked early universe conditions as described in the previous section. Instead of producing a quark-gluon plasma which behaved like a charged gas, with independent particle motions, collective coherent states within the fireballs were observed. The particles collisions moved collectively under the influence of pressure variations in the same manner as a fluid state. The post collision particles behaved like a perfect uniform fluid, in which heat was able to dissipate rapidly. ^{*26}

Where We Stand

A major factor in the advance of physical science from its primitive beginnings to its present position has been the availability of mathematical techniques to aid in the acquisition of knowledge and to facilitate the systematization and utilization of that knowledge after it has once been acquired. The practical advantages of having a substantial portion of the accumulated knowledge in any physical field available in a form suitable for mathematical manipulation and easy adaptation to the specific problems at hand are familiar to all concerned and need no particular comment. Equally important to the investigator is the conceptual freedom which is attained by the use of mathematical rather than verbal reasoning. The answer to a problem of long standing in the physical field usually involves some significant change in the basic concepts entering into the phenomena with which the problem is concerned, but the ability of the human mind to break loose from the shackles of traditional thought and formulate totally new concepts is severely limited, and finding the solution to a problem of this kind by direct means is extremely difficult.

If the problem is attacked mathematically, however, the investigator has much more freedom. He is still circumscribed by the limits of current thinking with respect to the definitions of his terms and other general concepts entering into his mathematical expressions, but from there on he is essentially free of restraint. If a direct function fails to serve his purpose, he is entirely at liberty to try an inverse function; if a trigonometric relationship proves to be inapplicable, he is free to try a logarithmic relation, and so on, even though the conceptual changes involved in these modifications of the mathematical relationships are so drastic that they would be essentially inconceivable from the standpoint of a direct conceptual approach. Because of this freedom of maneuver, it is often possible to obtain a mathematical solution for the problem under investigation and to embody this solution in an equation or some other mathematical expression. With this mathematical knowledge at hand, the investigator may then be able to go back to the physical meaning of the mathematical terms and make the conceptual jump that was not possible without the guideposts established by the mathematical study. ^{*27}

Bliss Point

One of the things that really surprised me was how concerted and targeted the effort is by food companies to hit the magical formulation. Take sugar for example. The optimum amount of sugar in a product became known as the 'bliss point.' Food inventors and scientists spend a huge amount of time formulating the perfect amount of sugar that will send us over the moon, and send products flying off the shelves. It is the process they've engineered that struck me as really stunning. ^{*28}

Welcome Home (Again)
